

**Over 3 million tasks. 4 million transactions.  
590,000+ empowered users.**

Smarter. Faster. More competitive. Striven is an all-in-one business management software that helps SMBs grow, simplify, and reduce costs. It combines tools for accounting, CRM, projects, inventory, HR, and more, all on a single platform. Striven is fully cloud-based and can be used anywhere, on any device.

## Letter From Our CEO

At Striven, we believe that when we remove the problems caused by unconnected or legacy software, we're not just helping your organization— we're helping people. Because your business is only as good as the people who work with you. When their processes become easier and they can truly collaborate, you create a culture that's as positive as it is productive.

People using Striven can do things their competition can't. They work smarter, think faster, and make more informed decisions. And they're happy, because the improvements they see are more important than the tasks on their list.

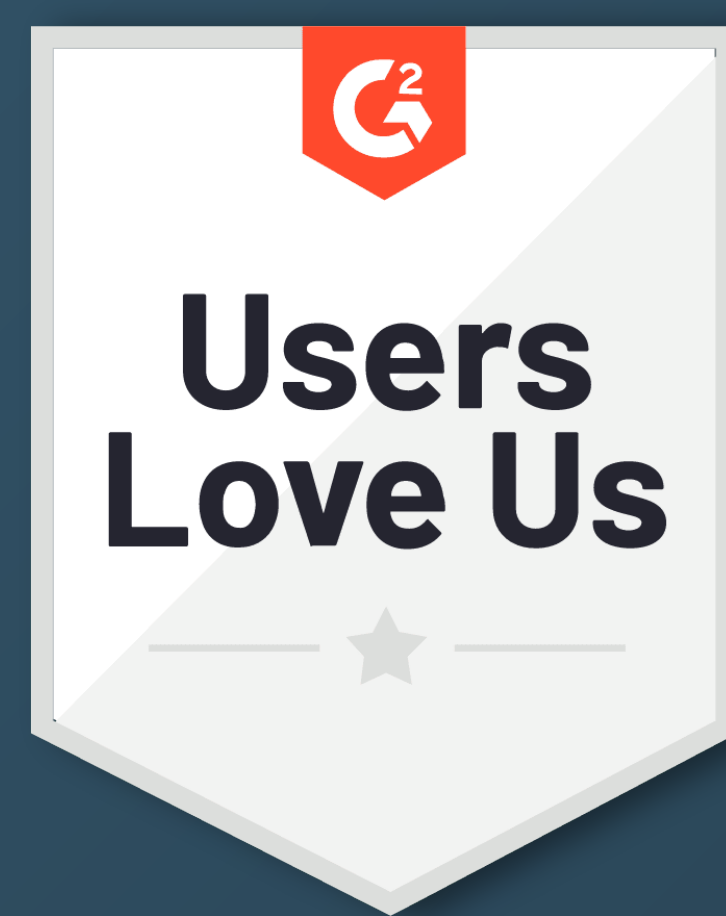

We believe superior business management software makes the difference in your productivity, savings, and satisfaction. We've seen it for years. If you haven't seen it yet, we invite you to grow with us, thrive with us, and experience a system that empowers everyone.

**Chris Miles**  
*CEO, Miles Technologies*
